Comparison of remote soundings:

- ✓ Homogenize respective meas. coordinates, e.g. units + vertical grid.
- No** problem for simple profile comparison, as simple profile interpolation would do the job...
- But:** problem when taking AKs + a-priori information into account! (cf. Rodgers and Connor, JGR 2003)
- ➔ Method to convert also auxiliary retrieval products AKs, etc.

Idea (Trivial!)

$\bar{\mathbf{x}}$: Retrieved profile on a given vertical grid

$$\mathbf{y} - \mathbf{y}_0 = \mathbf{K}(\mathbf{x} - \mathbf{x}_0) + \boldsymbol{\varepsilon}_y$$

$\bar{\mathbf{x}}$: Retrieved profile on another vertical grid

$$\mathbf{y} - \mathbf{y}_0 = \bar{\mathbf{K}}(\bar{\mathbf{x}} - \bar{\mathbf{x}}_0) + \boldsymbol{\varepsilon}_y$$

→ It exists \mathbf{W} such as

$$\bar{\mathbf{x}} - \bar{\mathbf{x}}_0 = \mathbf{W}(\mathbf{x} - \mathbf{x}_0) \quad \text{or} \quad \bar{\mathbf{x}} = \mathbf{W}\mathbf{x}$$

And

$$\mathbf{x} - \mathbf{x}_0 = \mathbf{W}^*(\bar{\mathbf{x}} - \bar{\mathbf{x}}_0) \quad \text{or} \quad \mathbf{x} = \mathbf{W}^*\bar{\mathbf{x}}$$

\mathbf{W}^* : Pseudo-inverse of \mathbf{W}

Consequently:

$$A \approx W^* \bar{A} W$$

Or

$$\bar{A} \approx W A W^*$$

Similarly:

$$\bar{S}_x \approx W S_x W^T$$

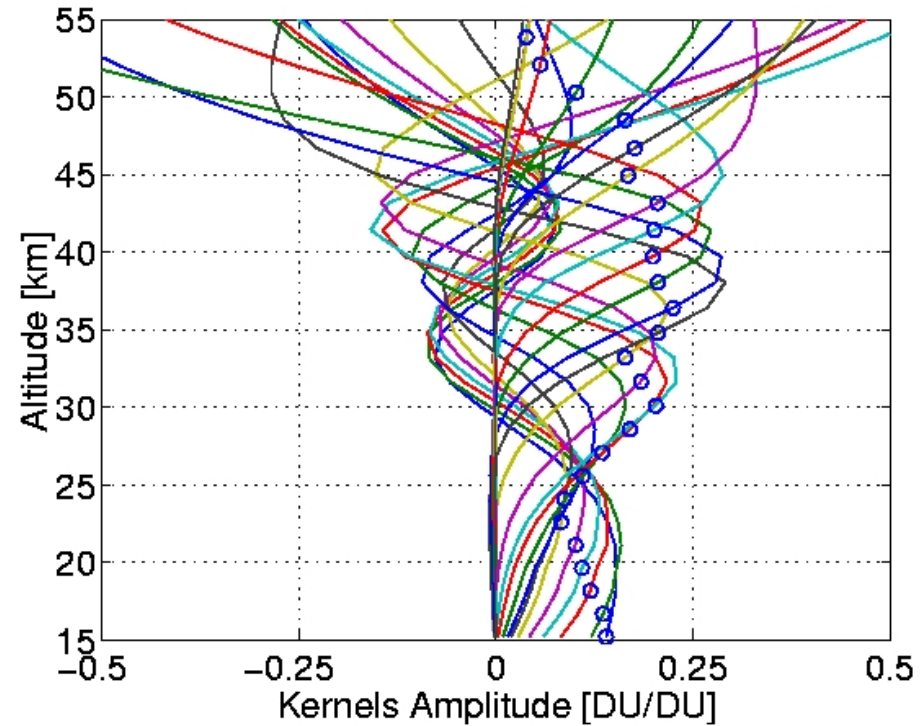

.....

Application: GOME - SOMORA O₃ Profile Comparison (Cf. Rodgers and Connor, 2003)

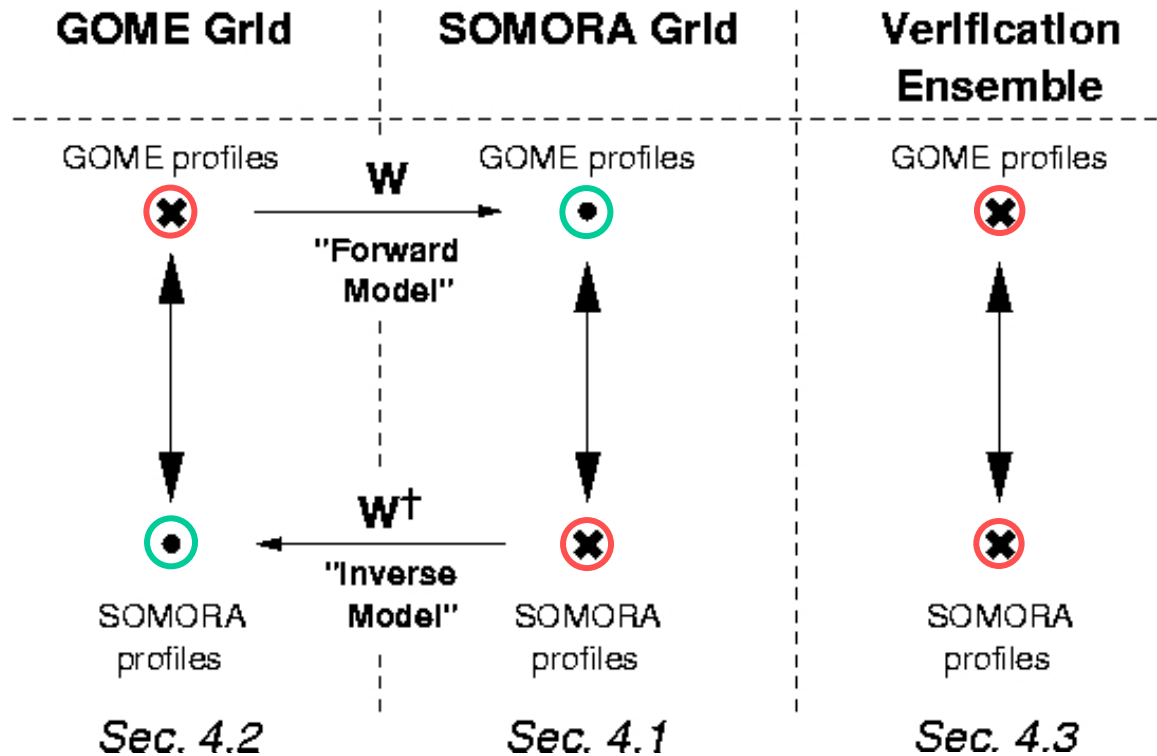

SOMORA AKs

GOME AKs

Comparison procedure:

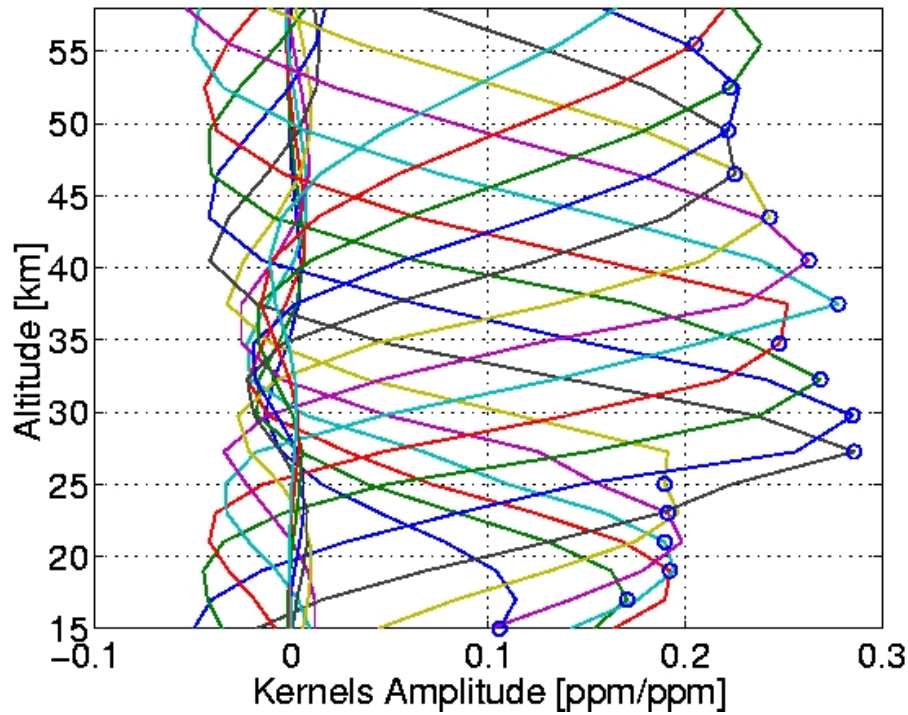

○ : original datasets (respective vertic. grids and units)

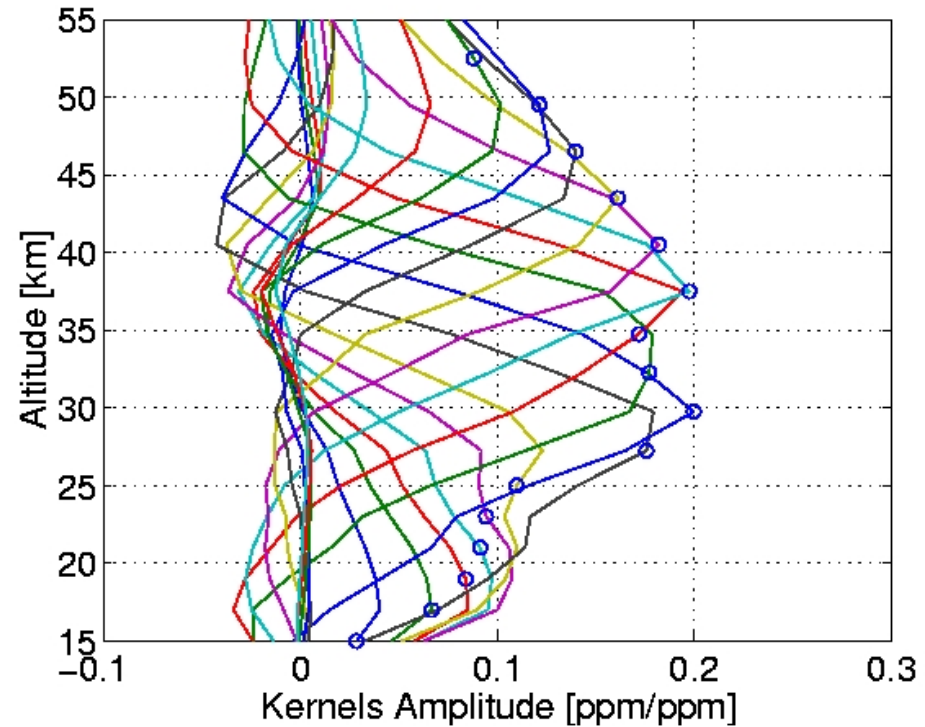

○ : transformed datasets (grids and units)

AK Comparison:

SOMORA AKs

GOME transf. AKs

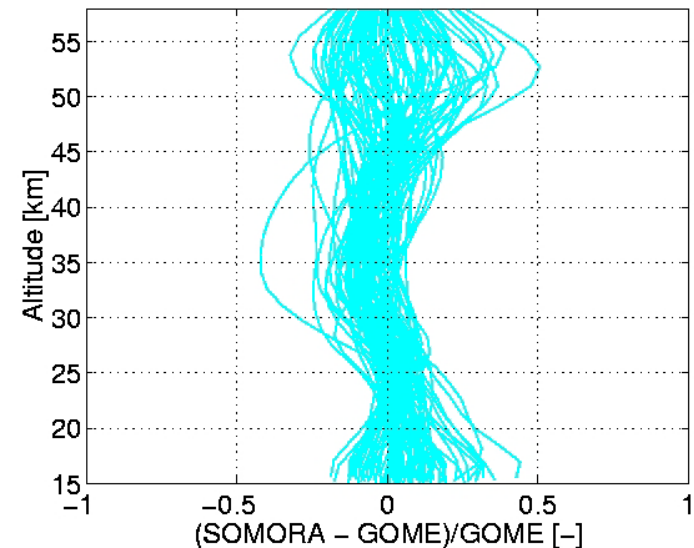

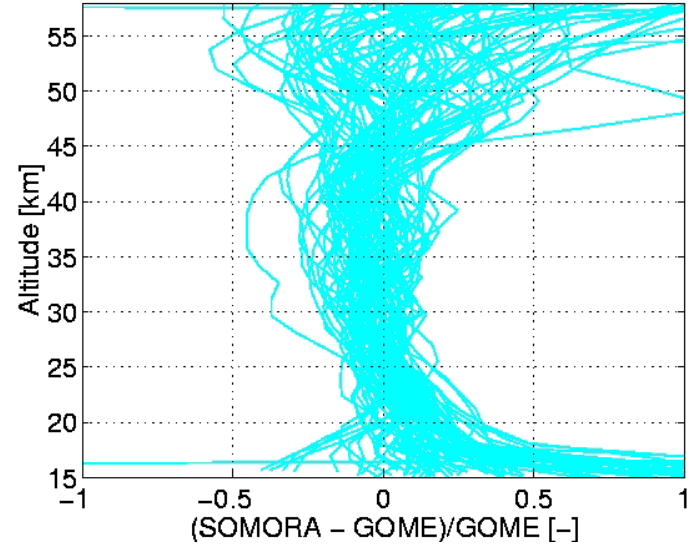

Profile Comparison:

GOME transformed to SOMORA grid

SOMORA prof. retrieved on GOME grid

Conclusions and Outlook:

- ✓ Simple method to homogenize remote sensing measurements for comparison
- ✓ Does not require data re-processing
- ✓ Applied to intercomparison of SOMORA vs. GOME O₃ profiles
- ↪ Assess method limits or generalize to more tricky cases
- ↪ Include random errors in the analysis
- ↪ ...
